## Parts Cleaning Unit

Width 1000mm, Depth 570mm, Height 1000mm

**DESIGNED FOR USE WITH  
NONFLAMMABLE LIQUIDS ONLY**

### PARTS CLEANING UNIT FEATURES

- Easy to use - portable - free standing.
- Safe and efficient.
- Durable heavy gauge electro galvanised steel for added protection against rust.
- Heavy gauge wire mesh screen ensures parts are washed cleanly (and left to dry) clear of grime and contaminated fluid.
- Removable perforated metal container enables smaller parts to be safely washed and dried.
- Quality durable flow-through cleaning brush.
- Effective three stage filtering system ensuring only clean cleaning fluid is recovered.

**Stage 1** - This removable filter is cylindrical and perforated and designed to catch larger particles.

**Stage 2** - A removable tray provides a settling container for sediment.

**Stage 3** - Remaining sediment settles in the 'water trap' in the removable drum. The drum carries water at the bottom with the solvent floating on top.

- High in the drum sits a robust fully submersible pump that picks up only clean solvent, delivering at low pressure a continual stream to the brush.
- Single phase power supply - 230 volt
- Easily maintained - There is sufficient feed hose and power cable length to enable the drum to be easily slid clear of the unit.
